

JASON PERSINGER

Technical Support Engineer

Roanoke, VA | (540) 394-8222 | jason.persinger@gmail.com

SUMMARY

Technical support engineer with 5+ years of experience troubleshooting complex SaaS workflows, leading escalations, and building tooling that scales support quality. Daily-driver Linux user with hands-on scripting, API debugging, and SQL skills, plus production experience building LLM-powered internal tooling to improve support outcomes. Strong track record in root cause analysis, technical documentation, and cross-functional work with product and engineering. Open to remote support engineering, customer success engineering, and implementation engineering roles at technical SaaS companies.

CORE COMPETENCIES

Technical support engineering • Root cause analysis • Escalation management • Log and configuration investigation • API and integration debugging • Technical documentation and knowledge base development • LLM and AI tooling for support workflows • Customer onboarding and training • Cross-functional product and engineering partnership • Salesforce and Jira

PROFESSIONAL EXPERIENCE

Software Support Analyst | AbsenceSoft

Denver, CO (Remote) | January 2023 to Present

- Lead technical investigation and root cause analysis on complex enterprise leave management cases, tracing issues across application workflows, configuration state, and third-party integrations.
- Designed and maintain a suite of internal AI tools using the Claude API, including structured system prompts governing ticket triage, customer reply drafting, internal Jira escalation comments, RCA documentation, and Tier 2 escalation packages.
- Author user guides, troubleshooting runbooks, and knowledge base content that reduce repeat contact volume and accelerate new-hire onboarding.
- Partner with product and engineering through Salesforce and Jira to escalate defects with reproducible test cases, scope customer impact, and drive resolution within SLA targets.
- Identify recurring issue patterns and submit prioritized product enhancement requests grounded in customer impact data.
- Tailor communication for HR administrators, executives, and end users based on technical proficiency and case urgency.

Owner and Operator | Pixel Patcher (pixelpatcher.com)

Roanoke, VA | August 2025 to Present (concurrent)

- Founded and operate a mobile PC repair and IT services sole proprietorship serving residential and small business clients in southwest Virginia.
- Handle the full customer lifecycle: intake, diagnosis, repair, invoicing, and post-service support.
- Built the operational stack end-to-end, including business formation, insurance, payment processing, branded customer documents, and a self-hosted RustDesk remote support relay.

Support Team Lead | Binance.US

San Francisco, CA (Remote) | July 2021 to December 2022

- Led a team of approximately 8 support analysts handling escalated and time-sensitive cases on a regulated US cryptocurrency exchange.
- Built onboarding and ongoing training programs covering product knowledge, support workflows, and regulatory compliance requirements.
- Created and maintained the knowledge base that became the team's primary resource for onboarding and day-to-day troubleshooting.
- Translated platform and policy changes from business stakeholders into clear, accurate support guidance for the team and end users.

- Coached team members through regular feedback, structured case review, and individual skill development plans.

Implementation Project Manager | PowerSchool

Roanoke, VA | December 2019 to June 2021

- Managed end-to-end SaaS implementations for K-12 school districts, from discovery and configuration through training and post-launch support.
- Resolved integration and configuration issues by coordinating between client stakeholders and internal engineering teams.
- Delivered training for administrators, teachers, and support staff with content adapted to varying technical comfort levels.
- Balanced multiple concurrent implementations with competing deadlines in a fast-changing product environment.
- Built customized support and training materials aligned with each district's rollout goals and operational constraints.

Online Solution Specialist | PowerSchool

Roanoke, VA | November 2018 to December 2019

- Delivered remote training sessions and product walkthroughs to K-12 administrators, teachers, and IT staff onboarding to PowerSchool's online learning solutions.
- Troubleshoot product issues reported by customers, coordinating with internal engineering on defect resolution with reproduction steps and customer impact context.
- Authored knowledge base content, training guides, and quick-reference materials that supported customer self-service and reduced inbound support load.
- Maintained customer relationships through proactive follow-up, ongoing check-ins, and product adoption coaching during rollout phases. Promoted to Implementation Project Manager in December 2019.

SELECTED PROJECTS

holler.works. Regional tech job board focused on the Appalachian region. Full-stack production application on Firebase with a Cloud Functions backend, Netlify frontend, and magic-link admin authentication. Designed, built, deployed, and operated end-to-end.

Internal AI tooling for SaaS support workflows. Authored a suite of Claude API system prompts that govern daily support work, with templated structures for Tier 2 escalation, product enhancement requests, RCA documentation, and customer reply drafting. Demonstrates applied LLM engineering in a production support context.

Self-hosted home infrastructure (voidbox). Linux server stack running Pi-hole in Docker, Tailscale mesh networking for secure remote access over CGNAT, automated rclone backups via systemd timers, and a personal markets dashboard. Hands-on Linux administration, containerization, and networking.

TECHNICAL SKILLS

Operating systems and shell: Linux (daily driver, CachyOS), Bash scripting, Git

Languages: Python, SQL, JavaScript

APIs and protocols: REST and JSON, SSO, SAML, OAuth, basic networking

Support and ticketing tools: Salesforce, Jira, knowledge base authoring

AI and LLM: Claude API, Gemini API, prompt engineering for production support workflows

Infrastructure and deployment: Docker, Tailscale, Firebase, Netlify, systemd, self-hosted services

EDUCATION AND CERTIFICATIONS

B.S. English Literature | Radford University

Google IT Support Professional Certificate
